

Sharon Leo

Software Engineer II - Java/Spring

Seattle, WA | +1 (206) 434-8577 | leosharon181@gmail.com | <https://www.linkedin.com/in/sharon-phyllis-leo>

SUMMARY

Software Engineer II with 4+ years designing backend systems, secure REST APIs, and database solutions on AWS, specializing in Java & Spring Boot, with React frontend skills. Experienced in building enterprise applications, optimizing SQL Server, modernizing legacy systems, and supporting live production environments. Agile team collaborator skilled in delivering robust software for critical business workflows.

SKILLS

Languages: Java, Python, TypeScript, JavaScript, C#, C/C++, SQL, Bash
Frontend: React, TypeScript, REST API integration, Component design
AWS Services: S3, EC2, Lambda, ECS, SQS, SNS, Kinesis, DynamoDB, Glue, SageMaker, Bedrock, CloudWatch
Databases: DynamoDB, PostgreSQL, SQL Server, MongoDB, Redis, Aurora RDS
DevOps and Infra: Docker, Kubernetes (EKS), Terraform, Jenkins, CI/CD, Git, Linux
Concepts: Microservices, Distributed Systems, REST/GraphQL APIs, Event-Driven Architecture, CQRS, Event Sourcing, Design Patterns, SOLID, Agile/Scrum

EDUCATION

Seattle University | WA

Mar 2024

Master of Science in Computer Science

- Coursework: Advanced Software Engineering, Cloud Computing, Distributed Systems, Software Design and Architecture, Software Testing
- Teaching Assistant: Cloud Computing, Security in Computing, Software as a Service, Programming in C++ (Jan 2023 - Mar 2024)

Visvesvaraya Technological University | India

Jul 2019

Bachelor of Engineering in Computer Science

EXPERIENCE

E-claim.com, LLC | US (Remote)

Aug 2024 - Present

Software Engineer II (Java/Spring)

- Owned backend services for ClickClaims, a multi-tenant enterprise platform handling 50K+ daily transactions in Java/Spring Boot. Rebuilt core payment and validation APIs with transactional consistency and idempotency guarantees, reducing error rates on duplicate submissions by over 90%.
- Built and maintained React/TypeScript UI features for the customer-facing claims management interface serving tens of thousands of users, working closely with backend APIs to deliver end-to-end functionality across 5+ core workflows.
- Optimized SQL Server query performance by reworking execution plans, restructuring joins, and adding composite indexes, cutting average query execution time by over 50% during peak load.
- Designed event-driven async processing for long-running jobs including payment reconciliation and third-party sync using SQS-backed workers and Kinesis streams, reducing job failure rate by about 30% and enabling independent scaling.
- Decomposed a legacy monolith into smaller services using clean architecture and SOLID principles, cutting deployment cycle time by 35%. Handled OAuth2/JWT integrations for two external partners and set up CloudWatch logging for audit and operational visibility.

Nutanix | India

Dec 2020 - Aug 2022

Member of Technical Staff II

- Worked on Nutanix Objects, an S3-compatible distributed object storage product supporting clusters of up to 60 nodes, contributing to control plane features including object lifecycle management and metadata consistency.
- Implemented S3 API operations including GET, PUT, DELETE, HEAD, and multipart upload across the distributed storage layer, including tests to validate correctness across failure scenarios.
- Built multi-threaded Python services to simulate and benchmark backup and recovery workflows across AWS, Azure, and GCP. Improved pipeline throughput by 40% through parallelization and backpressure tuning, cutting benchmark runtime from about 12 hours to under 3.
- Tracked down critical production incidents in Logbay, the cluster log-collection service, resolving memory pressure issues at 60-node scale. Supported live distributed systems and participated in on-call troubleshooting.
- Participated in design reviews and mentored 2 junior engineers on distributed systems concepts and debugging practices.

HashedIn by Deloitte | India

Aug 2019 - Dec 2020

Software Engineer

- Built CRM features for SalesPhone, an iOS app serving 10K+ active users, including contact management, calendar events, and notes.
- Developed React-based frontend features for internal web tools, integrating with REST APIs and handling data display across multiple client views.
- Integrated REST APIs with OAuth2 for Salesforce, Microsoft Dynamics, LinkedIn, and Outlook.

KEY PROJECTS

Personal Finance Dashboard

- Built a full stack app with a Java/Spring Boot backend and React frontend that parses exported bank CSV files, categorizes transactions using keyword rules, and renders a monthly spending breakdown. Data stored in PostgreSQL; containerized with Docker for local deployment.

Job Application Tracker API

- Built a REST API in Java/Spring Boot to track job applications, statuses, and follow-up reminders, backed by PostgreSQL. Includes basic auth, pagination, and a simple notification scheduler using Spring's task execution framework.

CLI Tool for SQL Query Analysis

- Built a Python command-line tool that connects to a local PostgreSQL database, runs EXPLAIN ANALYZE on a given query, and surfaces slow operations and missing indexes in a readable format. Used personally during MS coursework and at work for quick query debugging.
